Identifying Ziegra triple version

There are two versions of the Ziegra triple water filter which look the same

Ziegra Triple: ZUK9700029

Ziegra Triple MKII ZUK9700029-2

They are functionally identical and the cartridges remain interchangeable. The only difference is the thread on the bowl mounting head, so if you need a replacement bowl you will need to order the correct part.

The easiest way to identify your Ziegra triple version is by the part number on the front label see part numbers above.

If the label has been removed or damaged so the part number cannot be read, the triple can be identified by looking at the bowl mounting thread. See images below.

Original Ziegra Triple

The bowl mounting thread on the head is female, as shown in the picture to the left.

The corresponding bowl has a male thread.

Ziegra Triple MKII

The bowl mounting thread on the head is male, as shown in the picture to the left.

The corresponding bowl has a female thread.

Once you have identified your Ziegra Triple water filter, the replacement bowl part numbers are:

ZUK9700038 for the Ziegra Triple

ZUK9700038-2 for the Ziegra Triple MKII
