

## Machine configurations

### Standard packaged.

A UK specification ice machine with the condenser built into the machine. Ice output guaranteed at 20degC air and 15degC water. This machine is suitable for installation in large, well ventilated spaces that do not rise above 25degC in summer. Available all models.

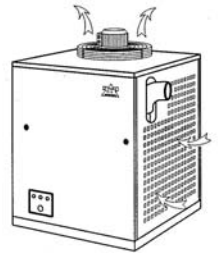

### Standard remote\* (subject to surcharge)

A UK specification ice machine with the condenser separate ready for remote mounting up to 10 metres away\*\*. Useful when the ice machine has to go into a space that is either poorly ventilated or the air is contaminated with a substance such as flour that may block the condenser fins or ammonia which may rot the condenser fins. Available from ZBE150.

### Tropical packaged. (subject to surcharge)

A tropical specification machine with the condenser built into the machine. Ice output guaranteed at ambient temperatures of 35degC air and 25degC water. Suitable for installation into large, well ventilated areas with no airborne contaminants. Useful in areas where ambient temperatures are high in summer. Available from ZBE375

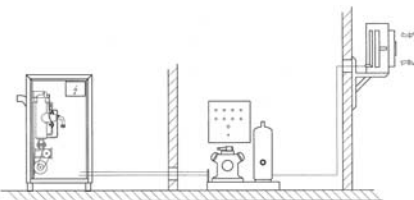

### Tropical remote\* (subject to surcharge)

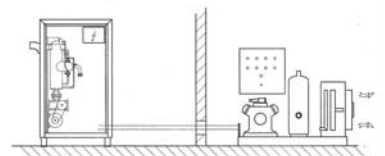

A tropical specification machine with the condenser separate ready for remote mounting up to 10 metres away\*\*. Useful when the machine has to go into a warm space that is either poorly ventilated or the air is contaminated with a substance such as flour that may block the condenser fins or ammonia which may rot the condenser fins. Available from ZBE375.

### Split systems\* (subject to surcharge)

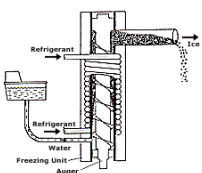

A fully split system, consisting of the icemaker in one location with the refrigeration unit in another location up to 10 metres away\*\* (the condenser may also be located in a third location if necessary). Useful when space is tight and the icemaker must take up as little room as possible.

\*remote machines must be installed by a competent refrigeration engineer. Ziegler are pleased to quote.

\*\*for longer distances, contact Ziegler.
